LEARN YOUR SECURITY TEAM’S WEAKNESSES BEFORE IT’S TOO LATE

THERE’S TOO MUCH AT STAKE TO BE UNCERTAIN ABOUT YOUR CYBER SECURITY TEAM.

Cyberattacks are inevitable—and they can wreak havoc on every facet of your business. A single breach can severely damage your reputation, lead to litigation, and cost you millions of dollars in potential lost revenue. That’s why you need a cybersecurity team with deep technical skills to keep your organization safe.

That’s why you need a cybersecurity team with deep technical skills to keep your organization safe. Just because half of your cybersecurity team members were trained in the past six months does not mean they have the skills to keep up with the latest threats. This widespread uncertainty among even the most experienced team members makes it even more challenging to determine whether candidates have the technical skills to fill these gaps.

62% ORGANIZATIONS BELIEVE HALF OR LESS OF THEIR SECURITY AND APPLICATIONS ARE SECURE!

In fact, most organizations believe only half (or even fewer) of their cybersecurity team has the level of technical skill needed for their environment. Perhaps it’s why only 7% of companies feel critical security posts remain vacant as long as six months. This widespread uncertainty among even the most experienced team members makes it even more challenging to determine whether candidates have the technical skills to fill these gaps.

EXISTING AND PROSPECTIVE TEAM MEMBERS NEED TO BE ASSESSED PROPERLY.

Typical security hiring practices aren’t very effective in determining how prospective employees will actually perform on the job. Many candidates might be well-qualified for high-level positions, but they lack the technical skills to fill these gaps.

CSX SKILLS ASSESSMENT

PERFORMANCE-BASED EVALUATION OF REAL TECHNICAL ABILITIES

The CSX Skills Assessment is a perfect complement to the Cybersecurity Nexus™ CSX Training Platform. It will help you fill the gaps in your organization or team, and you can direct their training towards those courses in that area. It’s a valuable tool for new hires and current employees alike. And for hiring and HR managers, the tool provides a structured way to assess and validate the technical skill sets of potential new hires. This provides assurance that you’re hiring top-flight talent with real technical skills—and assessing those who took good on paper but who can’t actually do the job.

CSX TRAINING PLATFORM IS DESIGNED TO HELP ORGANIZATIONS ENSURE THEY HAVE THE RIGHT PEOPLE WITH THE RIGHT SKILLS AT THE RIGHT TIME TO PROTECT AND DEFEND AGAINST RAPIDLY ADVANCING CYBERTHREATS.
